witr

Why is this thing running?

THE PAIN

lsuf tells you postgres
owns port 5432.

Why it runs is your problem

ps + systemctl + docker ps

WHAT IT DOES

- Enter by pid, port, file, container
- Names the owner: systemd, cron, pm2, ssh
- Warns: root, 0.0.0.0 bind, uptime
- JSON output and real exit codes

THE TWIST

40

lines of PPID walking

that is the whole magic

TAKEAWAY

The value is not the trace.
It is the interpretation
layer on top of it

still v0.3.3 · orphaned processes break the chain

TRY IT

**Apache-2.0, Go,
8 months old**
