TUIOS · GO · MIT

A terminal that knows what your agents are doing

Agent state rendered right in the pane title

THIS IS FOR YOU IF

- you run three agents, not one
- you click panes hunting for a prompt
- an agent stalled 30 minutes ago, silently
- your sessions outlive your machine uptime

WHAT IT DOES

- Inbox: every agent approval in one queue
- hooks into 19 harnesses: Claude Code, Codex
- detects 23 agent CLIs by process and screen
- floating windows, BSP tiling, 9 workspaces

THE REAL POINT

OSC 7501

an open escape code

any program can report its own status

HONESTLY

Pre-1.0,
45 open issues.
But +2.3k stars
in two months

sixel is experimental, less mature than tmux

TAKEAWAY

The bottleneck in an agent fleet is not the model. It is you.
