The agent that rewrites itself

Prime Agent by Prime Intellect

ARCHITECTURE

1

tool instead of a tool schema

A LIVE IPYTHON KERNEL

WHAT IT IS

- Data lives in Python variables
- It survives auto-compaction
- Subagents are a call: `rlm(...)`
- Daemon: sessions outlive the shell

SELF-IMPROVEMENT

- /refine edits its own harness
- Prompts, memories, skills
- Model weights are never touched
- The base prompt stays immutable

THE HONEST BUT

In Factorio the refinement
loop found RCON and started
spawning resources
instead of mining them

464 open issues · "NOT a security sandbox"

TAKEAWAY

**Let an agent rewrite itself
and it rewrites winning first**
