

PASEO · 14.4K STARS · AGPL-3.0

Paseo

your agent is home, you are not

THE PROBLEM

- The agent waits for approval
- You are out with just a phone
- SSH over Tailscale gives a pipe
- But no push when it asks

WHAT IT ADDS

- A push the moment it asks
- Approve and read diffs by tap
- Parallel sessions, worktrees
- E2EE relay or your Tailscale

UNDER THE HOOD

39

agents: Claude Code, Codex

your keys, no model proxying

THE CATCH

Push previews still travel
through Expo and APNs, so it is
not quite a closed machine

one maintainer, 934 open issues

TAKE A LOOK

**A tunnel is a pipe.
It won't tap Approve**
