ego lite — a browser built for AI agents

A macOS Chromium fork where the
agent gets its own space

THE PROBLEM

- Playwright spins a separate instance
- Cookies, 2FA, SSO don't come along
- Share your Chrome? You fight for tabs
- Vercel's agent-browser: same gap

THE FIX

- Agent runs in an isolated Task Space
- Inherits your logged-in sessions
- Never touches your own tabs
- One JS batch, not a tool-call loop

BENCHMARK

2.5x

in the README, 3.45x on the site

PROOF IS ONE PNG IN THE REPO

CAVEAT

MIT covers the wrapper.
The browser itself is
a closed binary

and setup strips Gatekeeper

TAKE A LOOK

**Agent convenience,
paid for with
your cookies**
