Measuring the silent nerf

liveness: 30 days after the Opus 5.5
launch

HOW IT WORKS

- 78 questions kept out of 2,336
- only the ones it solves sometimes
- run on the subscription, not the API
- one run a day, for 30 days

DECISION RULE

99%

interval excluding zero, twice in a row

committed to git before any data

GUARDS AGAINST SELF-DECEPTION

- control arm on the previous model
- CLI pinned, auto-updater disabled
- no LLM judge: the judge drifts too
- empty cwd: no tools, no memory files

THE HONEST LIMIT

Swapping Opus 5.5 for Opus 5
went undetected by the tool.
The author says so himself.

MORE

**Argue about "it got dumber"
only by rules you wrote
before seeing the data**
