Agent memory as a Markdown folder

OpenHuman · Rust + Tauri · GPL-3

WHAT IT DOES

- Pulls in mail, calendar, Slack, repos
- Stores none of it in a vector soup
- Writes a plain Obsidian vault instead
- Edit by hand, the agent sees it

WHERE IT LIVES

~/.openhuman

wiki/ — a plain vault

ALL OF IT ON YOUR DISK

THE TRICK

- Retrieval without a single LLM call
- Entity graph plus summary trees
- One tool named memory_tree
- Agent fleets survive a restart

THE CATCH

Local-first with an asterisk:
OAuth and web search still
route through their backend.

Fully local means Privacy Mode plus Ollama

TAKE A LOOK

**Uninstall the app,
the wiki stays**
