OPENSPEC · NOV 7

The spec comes before the code

A file layer for spec-driven work with AI agents

WHAT IT PUTS IN YOUR REPO

- openspec/ — plain markdown files
- specs/ — Given/When/Then contracts
- changes/ — proposed edits
- No API keys, no IDE lock-in

THE LOOP

- /opsx:propose — the agent drafts a plan
- Two minutes to read that plan
- /opsx:apply — only then write code
- /opsx:archive — delta merged into specs

NUMBERS

74k□

in 15 months, MIT, TypeScript

20+ assistants: Claude Code, Cursor, Copilot, Codex

THE HONEST CATCH

- Specs do not resync themselves
- Drift turns into duplicates and conflicts
- On a bugfix the loop is pure overhead
- Value rests on team discipline

TAKEAWAY

Reviewing a plan is cheaper than reviewing a diff
