

CLOUDFLARE · 11.5K 

The auditor that argues with itself

security-audit-skill, MIT

THE PROBLEM

- «find vulnerabilities» returns a wall of text
- plausible findings, half of them invented
- the same agent finds and confirms
- hardening tips instead of real holes

THE RULE

The agent that found
the bug never
confirms it

security-audit-skill

HOW IT WORKS

- 6 phases: recon → hunt → refute
- verdicts: confirmed / needs_validation
- coverage ledger lists what was skipped
- profiles: quick / standard / deep

FROM THEIR HARNESS

40% → 11%

false positive rate at validation

128 repos · 90% precision in a blind test

MORE

**A skill is now a methodology
distribution, not code**
