AGENT MEMORY · BENCHMARKS

A markdown folder still wins

I checked the numbers behind the README claims

WHAT I SHOPPED FOR

- a graph on Neo4j plus a vector store
- a context base with L0/L1/L2 loading
- learning memory on Postgres
- vector SaaS at $19–375 per month

THE LOCOMO AUDIT

99 / 1540

answer keys are simply wrong

this is the benchmark every vendor quotes

IT GETS WORSE

- the LLM judge accepts 62.8% false answers
- no commits to the repo since August 2024
- Letta: plain files plus grep score 74.0
- their own graph layer scores 68.5

THE REAL CHOICE

Not graph versus vectors — but when you pay for memory

on write, or on read

TAKEAWAY

Expensive memory starts where the messy folder ends
