

UNIVER

An office runtime for AI agents

Sheets, docs and slides in one engine —
browser and headless

THE PROBLEM IT SOLVES

- agents can read a spreadsheet, not edit it
- openpyxl and SheetJS write raw bytes
- no formula recalculation, no rendering
- broken layout surfaces only in review

HOW IT WORKS

- the agent gets its own draft worktree
- edits go through one Facade API
- the engine recalculates formulas itself
- screenshot plus a layout lint pass

SCALE

500+

functions in engine-formula

Apache-2.0, headless mode on Node

HUMAN IN THE LOOP

- diff the draft against trunk
- merge, reopen or discard in one click
- revisions live in a single SQLite file
- same API in the browser and on the server

THE HONEST TRADE-OFF

Excel import and export sit behind Pro — and Pro sales are paused right now.

MORE

**Four years a web grid,
one week as the office
layer for agents**
