FORENSICS · AMNESTY

Check your iPhone for spyware yourself

iOS has no antivirus — it has mvt instead

ONE EVENING, FOUR STEPS

- make an encrypted backup in Finder
- mvt-ios decrypt-backup
- mvt-ios check-backup
- read the *_detected.json files

INDICATOR DATABASE

11,625

IoCs across 19 collections

downloaded in six seconds, one command

WHAT IT CATCHES

- Pegasus, Predator, Candiru, Hermit
- DarkSword and Coruna, 2026 campaigns
- Operation Triangulation, stalkerware
- 1438 of 1549 Pegasus IoCs are domains

THE HONEST CAVEAT

It never returns
a clean verdict:
zero-days slip by

iVerify found 7 infections in 2500 scans

TAKEAWAY

The only check you can actually run yourself
