HACKER NEWS · 98 POINTS

A dead man's switch for the solo developer

You vanish — your daemons keep running

HOW IT WORKS

- once a week you press I'm alive
- miss it and five stages escalate
- at 72h your next of kin is asked
- at 144h your contacts get the letters

WORST CASE

13

days from the last check-in

a fixed weekday, not a floating timer

WHAT IS INSIDE

- PHP 8.1, a cron job every 15 minutes
- no database — state lives in JSON
- holiday pause of up to 28 days
- email only: no webhooks, no SMS

THE HONEST CAVEAT

At 45 your odds
of dying in a week
are 1 in 16,000

so most missed check-ins are holidays

TAKEAWAY

Bus factor = 1
is no longer about code,
but about what keeps running
