

GITHUB · 3.7K STARS · APACHE-2.0

The log is the runtime

Apache Maka (Incubating)

THE PROBLEM

- Compaction deletes real history
- No record of what the agent did
- Failed runs are not reproducible
- Approvals buried in chat text

HOW IT WORKS

- An append-only event log
- Local SQLite, nothing leaves the box
- The prompt is just a projection
- Compaction trims prompt, not history

SPEED

3 mo

from first commit to 3.7k stars

88 CONTRIBUTORS, 2696 PRS

CAVEATS

- Zero Apache releases so far
- Desktop is Apple Silicon only
- API keys stored in plaintext
- Version 0.1.11, formats still break

TAKE A LOOK

**The log is the runtime,
not just logs**
