Secrets in a repo an agent lives in

OpenBao — the open Vault fork under
OpenSSF

WHY .ENV IS THE WRONG ANSWER

- the password never expires
- your agent reads the whole file
- it leaks into commands and logs
- you find out last

INSTEAD OF A FOREVER PASSWORD

1 h

default_ttl

a fresh DB login per request, then gone

WHAT YOU GET

- dynamic secrets with TTL and leases
- revoke -prefix kills a whole subtree
- secrets in a child process env
- Namespaces free, Enterprise in Vault

WHY THE FORK HAPPENED

\$6.4B

IBM bought Vault

BUSL license closed it, the code forked

MORE

**Never hand an agent
a secret that never dies**
