Git cracked under agents

Seven people replaced it in five months

MERGES PER DAY

30,000+

in September, up from 2,500 in May

a 12x jump in four months

WHERE GIT RAN OUT

- ~100 GB of main-branch history
- 25M CI checkouts every day
- 600 PB of traffic if fetched naively
- hundreds of mirrors as a crutch

WHAT THEY BUILT INSTEAD

- Scion: history lives on the server
- commit and rebase happen there
- nothing left to push
- offline dropped on purpose

WHY OFFLINE DIDN'T MATTER

The heaviest user
of the system
is always online

and it is not a human
