

CLAUDE CODE · PUBLIC BETA

Run Claude Code on your own compute

claude self-hosted-runner

THE PAIN

Someone else's cloud clones
your private repository
and builds it on their box

that is the default for cloud sessions

WHAT CHANGES

- Sessions from web, mobile, routines
- Execute on machines you operate
- The runner polls the API outbound
- Anthropic never connects inbound

WHY BOTHER

- Reach internal services and databases
- Bake in your SDKs and internal CLIs
- Checkouts and artifacts stay with you

THE LIMIT

1

user per runner

fleet size = concurrent users

DOCS

**Own where the code sits,
not where tokens go**

code.claude.com/docs
