The browser that stays invisible

camofox-browser · MIT · JS

THE PROBLEM

Your agent is blocked
not by the model,
but by Cloudflare

stealth plugins became the fingerprint

WHAT IT IS

- A server around Camoufox, a Firefox fork
- Spoofing baked into C++, not bolted on
- Accessibility snapshots instead of raw HTML
- MCP adapter and GeolP-aware proxying

SCALE

57%

of Cloudflare traffic is bots

BOTS NOW OUTNUMBER HUMANS

HONEST LIMITS

- Not a drop-in Playwright replacement
- No TLS fingerprint or IP cover
- Does not solve CAPTCHA or Turnstile
- Telemetry is enabled by default
