

GITHUB · 13.5K STARS · GPL-3.0

holehe

where your email is registered

WHAT IT DOES

- Takes a single email address
- Checks it against 120+ sites
- Social, shops, forums, shopping
- The owner gets no alert

HOW IT WORKS

The leak is not the password
reset form. It is the plain
"this email is already taken"

100 of the 121 modules

SPEED

~30s

for every site at once

table or CSV output

THE CATCH

No commits since 2024, and
every fourth site is flagged
rate limit — those results lie

successor: user-scanner

RUN IT ON YOURSELF

**A different address
for every service**
