SUPPLY CHAIN · OCT 29

Someone else's key under a vendor name

A backdoor shipped inside an official extension

WHAT HAPPENED

- Cursor Marketplace, anthropic.claude-code
- 66 lines prepended to the bundle
- Version 2.1.313 under the official name
- VS Code Marketplace, Open VSX, npm were clean

WHAT THE CODE DID

- Wrote svc-telemetry key to authorized_keys
- Enabled Remote Login on macOS
- Installed a LaunchAgent for persistence
- Opened a reverse SSH tunnel to C2

SCALE

11 h

window in the marketplace

up to ~5000 machines got the build

CHECK YOURSELF

- grep svc-telemetry ~/.ssh/authorized_keys
- LaunchAgents: com.apple.sysmond.plist
- crontab -l for @reboot entries
- Found it? Rotate keys from a clean machine

TAKEAWAY

A vendor name on a package is not a vendor signature on the code
