jcode — the harness that spares your RAM

A native Rust binary instead of Node,
MIT licensed

THE PROBLEM

- You run 5-10 agents at once
- Node harnesses eat gigabytes
- Your laptop hits its memory ceiling
- Every session costs seconds to start

10 SESSIONS

261 MB

against 2.3 GB for Claude Code

OPENCODE SITS AT 3.2 GB

WHAT'S INSIDE

- Semantic memory as a graph
- Swarm: agents see each other's diffs
- Self-dev: it patches its own Rust
- Imports Claude Code and Codex sessions

THE CAVEAT

The headline 27.8 MB
runs with embedding off.

Default is 167 MB

benchmarks are self-reported

TAKE A LOOK

**Worth a look.
Worth moving your
whole fleet? Not yet**
