Someone else's prompts in your response

Cloudflare's postmortem on a cross-tenant KV cache leak

WHAT HAPPENED

- the glm-5.3 model on Workers AI
- 13 days of cross-tenant bleed
- both prompts and generations leaked
- found by an outside researcher

THE SCALE

155

responses carrying other users' data

Aug 27 – Sep 9, 2026 · Cloudflare Workers AI · glm-5.3

ROOT CAUSE

- advertised context: 1,048,576 tokens
- actual KV cache pool: 681,280
- oversized prompts were not rejected
- node read 8 pages, one was written

WHY IT MATTERS

- the KV cache is your raw prompt
- shared cache means shared GPU memory
- fixed in SGLang v0.5.22, still shared
- long context carries .env and keys

TAKEAWAY

"We don't train on your data" and "your neighbor won't see it" are different promises
