

GITHUB · 12.4K STARS

Real iOS on your Mac, in one command

vphone-cli by Lakr233

WHAT IT IS

- real iOS running as a VM
- live kernel, SEP, boot chain
- installs via Homebrew
- SSH, VNC and a GUI window

WHERE THE IMAGE COMES FROM

1.2 GB

Apple PCC research image

served from Apple's CDN, no auth

THE WILD PART

- Apple built the virtual iPhone
- identity iPhone99,11 inside PCC
- nobody wrote an emulator
- key flag: allow-research-guests

THE HONEST PART

- you must disable SIP and AMFI
- no App Store, no Apple ID
- one model only: iPhone 16
- ~12 GB of firmware to download

MORE

**The Xcode simulator
is no longer your only option**
