

CONTEXT-MODE · RTK · CAVEMAN

Two schools of context economy

Cut what goes in, or cut what the agent
says

HOW CONTEXT-MODE WORKS

- a hook blocks the call before it runs
- the work moves into a sandbox subprocess
- only stdout reaches the context window
- output over 100 KB becomes an FTS5 index

THE HEADLINE NUMBER

—98%

the best slice of three benchmarks

all 21 scenarios together land at 96%

WHERE IT DROPS

82%

searching docs and code

Supabase Edge Functions: just 44%

NOT IN THE HEADLINE

- third-party MCP calls are never intercepted
- a nudge every 10th call instead of a filter
- Elastic License 2.0, not OSI approved
- npm still frozen on the June build

THREE APPROACHES

MORE

**They measure bytes,
not solved tasks**
