

TREG

One token instead of ten subscriptions

Your agent calls paid APIs you never
signed up for

THE PROBLEM IT SOLVES

- Semrush is 139\$ a month for one run
- Moz 99\$, Crunchbase 99\$, Apollo 59\$
- API keys scattered across every laptop
- half the useful APIs sit behind signup walls

WHAT IS IN THE CATALOG

3600

endpoints from 97 providers

one base URL, pay per call

HOW IT WORKS

- credentials are injected server side
- only 10 tools enter your context
- the catalog hides behind catalog_search
- treg mcp install rewrites agent configs

HOW YOUNG IT IS

72

days since the first commit

3.3k stars, +470 in a day

THE HONEST TRADE-OFFS

MORE

**A subscription for three calls
is the worst buy in your stack**
