A video grabber in 6 KB of Python

ReClip: paste the links, get MP4 or MP3

WHAT IT DOES

- 1000+ sites — whatever yt-dlp handles
- MP4 or MP3, quality picker
- bulk links and playlists at once
- one command, localhost:8899

THE NUMBER THAT SCARES

10.6k

stars on 19 commits, 0 releases

last commit was 87 days ago

WHAT IS MISSING

- no auth, no password at the door
- no progress bar, cancel or history
- no cookies for your own private media
- the queue is a dict in memory

AN OPEN HOLE

The url reaches yt-dlp with no separator: anyone who gets the port reads your files.

MORE

**Stars measure the README,
not production**
