

CLAUDE CODE · v2.1.259

Ship MCP servers to the whole fleet

managedMcpServers — provisioning
from the admin panel

BEFORE

- managed-mcp.json on every machine
- rollout via MDM and admin rights
- the file took exclusive control
- users could not add their own

NOW

- define the server in `claude.ai` admin
- it lands on every developer
- additive: personal servers stay
- applies with no session restart

LIMITS

- https only, http/sse only
- no stdio servers via npx
- command and env are rejected
- admins cannot run a local process

HEADS UP

allowedMcpServers changed meaning:
a previously filtered server
now loads on upgrade, silently

docs · managed-mcp

MORE

**Convenience is not
a security boundary**
