

TENCENT · 5.9K STARS

**Your agent in
your browser,
not in its own**

BrowserSkill, MIT

THE PROBLEM

- agents hit login walls on every site
- a fresh Chrome copy knows none of your sessions
- Playwright MCP burns ~13.6k tokens on schemas
- bot detection flags the clean profile

THE IDEA

Not its own profile,
but yours —
already logged in

Tencent BrowserSkill

HOW IT WORKS

- an extension inside your Chrome or Edge
- plain shell commands: `bsk click @e3`
- the agent drives a separate Agent Window
- your tabs only via an explicit borrow

NUMBERS

5.9k 

in three months, MIT

CLI commands · Rust + TypeScript · Chrome and E
