GITHUB · 28.5K IN TWO MONTHS

Stage the shot first, generate second

ArtCraft: build the scene in 3D, then let the model paint it

WHAT A PROMPT CANNOT DO

- a second take, same angle
- the same character in the next shot
- the camera exactly where you want
- two shots inside one room

WHAT YOU DO BY HAND

- greybox the scene with primitives
- pose a mannequin on joint gizmos
- place the virtual camera
- the scene goes in as structure

THE PROMPT BAR

1

thin strip at the bottom

the 3D viewport takes everything else

THE HONEST DOWNSIDES

- no own models, 62 via API
- login required even in your build
- Linux only from source
- the founder calls it early alpha

MORE

Control went back to the artist,

nobody wrote the code
