CONTEXT · TOKENS

The tax on tools you never called

Playwright MCP vs the new browser harness category

THE PROBLEM

- 25 tools sit in your context
- JSON schemas load every request
- Even on steps without a browser
- You pay for them regardless

WHAT IT COSTS

150k → 2k

tokens in Anthropic's own example

code execution instead of direct tool calls

THE SHIFT

- agent-browser: Rust CLI, 50.4k stars
- ego-lite: your logged-in sessions
- Help text is read on demand
- Reported savings of 82-94%

FROM THE AUTHOR

"CLI invocations avoid loading large tool schemas into the model context"

the Playwright MCP README itself

TAKEAWAY

A tool schema is a subscription, not a purchase
