CINDY · TYPESCRIPT · APACHE-2.0

"Zero config" — and inside it is the same Claude Code

The out-of-the-box agent turned out to be a wrapper

THE PAIN

- setting up an agent eats your evening
- dozens of commands and skills in .claude/
- configs sprawl across every project
- cindy promises: "Consider it done"

WHAT IS INSIDE

- a wrapper around Claude Code and Codex
- memory and skills learn as you correct it
- switch harness and model mid-task
- backend is closed source, cloud is paid

THE COST OF GROWTH

1965

open issues at 5.4k stars

billing, stuck sessions, context that dies

THE IRONY

The agent that needs no configs ships an AGENTS.md in its own repo

10,202 commits in three months, still on v0.1.117-beta

TAKEAWAY

Zero config does not remove the setup.

It hides it in someone else's cloud
