

TINYCAST · 7K STARS

**A launcher
of 3.5 MB,
not 400**

Tinycast, AGPL-3.0

THE PROBLEM

- Raycast v2 moved to a web view and Node
- their own blog: 350–450 MB of RAM
- native v1 used to sit at 200–300 MB
- Pro costs \$96 a year

PROJECT RULE

Under 100 MB.

Always.

No feature is
worth going over

Tinycast CONTRIBUTING.md

HOW IT WORKS

- Swift 6, zero third-party dependencies
- runs real Raycast extensions, no Node
- their React renders as native SwiftUI
- imports your settings from `.rayconfig`

NUMBERS

3.5 MB

binary · 40–80 MB resident

7k⁺ in 84 days · free · macOS 26+ · self-signed

MORE

**A launcher shouldn't outweigh
the things it launches**
